

Wall Shelf 21" and 42" (TB 5212 / TB 5312)

MATERIAL

STEP 1 - Fix up the bracket to the wall

- Locate the wood studs inside the wall (normally disposed at each 16")
- Make sure that the tightening tongs have to point at the right.
- Fix up firmly the wall bracket with the 4 provided screws
- If the studs do not line up with the holes of the bracket, you may drill extra holes into the bracket where you can drill into the stud.

CAUTION

It is not recommended to mount the wall bracket between the wood studs of the wall with anchors made for the drywall because this will reduce the stability of the shelf.

STEP 2 - Insert the shelf over the wall bracket

- Insert the shelf over the wall bracket and align the middle of the shelf to 1 1/2" (3.75 cm) from the middle of the wall bracket to the right.

STEP 3 - Lock shelf

- Slide the shelf to the left.
- If the shelf doesn't lock, adjust the tightening tongs. (See the photo at the step 1)

WARNING

Do not put more than 15 pounds on the shelf.
